Dr. Winchester conducts seminars and lectures throughout the country.

In his teachings, Dr. Winchester shares methods he's developed to test toxins and their affect on muscle strength, brain and organ functions. He also teaches fellow practitioners how to detoxify the central nervous, peripheral and neurological systems of the body.

The seminars span two days and feature several workshops, along with hands-on training to ensure each attendee is proficient in Dr. Winchester's protocols. After the two days, practitioners from all disciplines walk away with tools to help their client's lead healthier, more comfortable lives.
